### WORK EXPERIENCE

#### Web Developer

Grape Technologies

- Coded websites using HTML, CSS, JavaScript languages.
- Planned website development, converting mockups into usable web presence with HTML, JavaScript, AJAX, and JSON coding.
- Multi-tasked across multiple functions and roles to meet deadlines and organizational expectations.
- Planned website development, converting mockups into usable web presence with HTML, JavaScript, AJAX and json coding.
- Provided back-end website development using Php-Laravel.
- Engaged with clients to plan and optimize site issues and queries.

### CERTIFICATIONS

#### Artificial Intelligence

IT Academy, PAF Base Lahore

- I was once a member of the Pakistan Air Force (PAF), where I spent six months at PAF Base Lahore. I attended an Artificial Intelligence (AI) course while I was there, and it really improved my knowledge and abilities. My understanding of cutting-edge technology and applications in the field of AI has significantly improved as a result of this AI course. I have gained knowledge and skills through this program that have enabled me to interact with AI-related ideas, tools, and methodologies in an effective way. I have a special combination of real-world military experience and a solid foundation in a disruptive technology like AI thanks to my time at PAF Base Lahore and my schooling in the field of artificial intelligence.

### PROJECTS

#### PIFFERS Security Services

- I have worked on many projects, but this one is particularly significant, so I'm mentioning it.
- For PIFFERS Security Services, I'm now developing an innovative web-based software solution that consists of critical modules like HRM, CRM, Payroll, Inventory, Training, Dashboard, Operations, and Attendance etc. As a web developer, my duties entail designing, creating, and maintaining the software to satisfy the particular needs of PIFFERS Security Services in order to increase their operational effectiveness and efficiency.
